

OECD – Paris, 10 April 2019

## **Development aid drops in 2018, especially to neediest countries**

### **OECD adopts new methodology for counting loans in official aid data**

In 2014, members of the OECD's Development Assistance Committee (DAC) decided to modernise the reporting of concessional loans by assessing their concessionality based on discount rates differentiated by income group, and introducing a grant-equivalent system for calculating ODA figures. Instead of recording the actual flows of cash between a donor and recipient country, DAC members agreed that the headline figure for official development assistance (ODA) would be based on the grant equivalents of aid loans, i.e. the "gift portion" of the loans, expressed as a monetary value<sup>1</sup>. The grant equivalent methodology would provide a more realistic comparison of the effort involved in providing grants and loans and encourage the provision of grants and highly concessional (or soft) loans, especially to low-income countries.

In 2016, DAC members also decided to apply the grant equivalent measure to other non-grant instruments, such as equities and private sector instruments (PSI) to better reflect the donor effort involved. Whilst DAC members agreed on a methodology for counting the grant equivalent of official loans and loans to multilateral institutions, they have yet to reach agreement on how to calculate ODA grant equivalents for equities, PSI and debt relief. Pending an agreement, DAC members have decided on provisional reporting arrangements for PSI whereby either contributions to Development Finance Institutions (DFIs) and other PSI vehicles may be counted at face value (using an institutional approach), or loans and equities made directly to private sector entities may be counted on a cash-flow basis (using an instrument approach)<sup>2</sup>, with any equity sale proceeds capped at the value of the original investment. DAC members will continue to work with the support of the OECD Secretariat in 2019 to find an agreement, and make the reporting of PSIs and debt relief consistent with the new grant equivalent method.

This change in the ODA methodology takes effect in 2019 with the publication of preliminary 2018 ODA.

The implementation of the ODA grant equivalent methodology adds 2.5% to 2018 ODA levels for all DAC countries combined, with impacts on individual country figures ranging from 40.8 % for Japan, 14.2% for Portugal and 11.4% for Spain to -2.7% for Korea, -2.8% for France, -2.9% for Belgium, and -3.5% for Germany.

The new "grant equivalent" headline ODA figures are no longer comparable with the historical series on "cash basis". In the cash basis, the net capital flow over the lifetime of a loan is nil because repayments of principal are deducted when made; interest payments are not taken into account<sup>3</sup>. In the grant equivalent method, both principal and interest payments are taken into consideration, but discounted to the value they represent in today's money.

<sup>1</sup> For further information see: [www.oecd.org/dac/financing-sustainable-development/development-finance-standards/official-development-assistance.htm](http://www.oecd.org/dac/financing-sustainable-development/development-finance-standards/official-development-assistance.htm).

<sup>2</sup> For further information see: [https://one.oecd.org/document/DCD/DAC/STAT\(2018\)9/ADD3/FINAL/en/pdf](https://one.oecd.org/document/DCD/DAC/STAT(2018)9/ADD3/FINAL/en/pdf)

<sup>3</sup> Deducting interest payments yields a measure called "net transfers".

In order to be fully transparent, the OECD will continue to also publish ODA data on a cash basis, but not as the headline ODA figure to measure donors' performance in volume or as a percentage of gross national income (GNI).

### **Preliminary ODA levels in 2018 on a grant equivalent basis**

In 2018, ODA by DAC members totalled USD 153.0 billion, representing 0.31% of their combined GNI (see Table 1 and Chart 1). This comprised USD 150.4 billion in the form of grants, official aid loans or contributions to multilateral institutions (calculated on a grant-equivalent basis); USD 1.5 billion to development-oriented PSI vehicles, USD 1.0 billion in the form of net loans and equities to private companies operating in ODA-eligible countries and USD 0.2 billion of debt relief.

The United States continued to be the largest donor (USD 34.3 billion), followed by Germany (USD 25.0 billion), the United Kingdom (USD 19.4 billion), Japan (USD 14.2 billion) and France (USD 12.2 billion).

ODA, on the grant equivalent basis as per cent of GNI met or exceeded 0.7% for Sweden (1.04%), Luxembourg (0.98%), Norway (0.94%), Denmark (0.72%) and the United Kingdom (0.70%). Many providers of development cooperation beyond the DAC also report their data to the OECD. Turkey and the United Arab Emirates both exceeded 0.7% ODA as a share of GNI, with 1.10% and 0.95% respectively.

G7 countries provided three-quarters of total ODA on the grant equivalent basis. DAC-EU countries provided 56.5% of the total, which represented 0.47% of their combined GNI.

### **ODA allocations on a cash basis**

As noted above, the “grant equivalent” headline figures are not comparable with the historical series on a “cash basis”. For the sake of transparency and analysis of trends over time, the OECD will continue to publish ODA data on a cash basis. The following data in this note all refer to net ODA flows on a cash basis.

Net ODA flows by DAC member countries were USD 149.3 billion in 2018, representing a fall of 2.7% in real terms compared to 2017 (see Table 2). The fall reflects a reduction in in-donor refugee costs for many DAC members; excluding these costs, net ODA levels were stable compared to 2017.

The number of refugees entering Europe has dropped since its peak in 2015 and 2016. DAC countries reported USD 10.6 billion in 2018 for in-donor refugee costs, a fall of 28.4% in real terms compared to 2017. These costs represented 7.1% of total net ODA compared to 9.6% in 2017 and 11.0% in 2016, when in-donor refugee costs were at their highest. For seven countries, these costs represented more than 10% of their total ODA and for two of them it was over 20% (see Table 3).

Net ODA flows for bilateral projects, programmes and technical assistance, which represent just over half of total net ODA, rose slightly by 1.3% in real terms in 2018 compared to 2017. Contributions to multilateral organisations, which represent about a third of total ODA, were stable. Humanitarian aid was USD 15.3 billion, a fall of 8% in real terms and debt relief grants rose to USD 801 million (see Chart 2).

The bulk of ODA is provided in the form of grants, but preliminary data show that the volume of gross loans extended to developing countries represented 17% of gross bilateral ODA (see Chart 3), and fell by 2.1% in real terms compared to 2017.

The preliminary data show that net bilateral aid flows to Africa were USD 29.7 billion, representing a fall of 4.0% in real terms compared to 2017. Within this total, USD 25.9 billion were for sub-Saharan Africa, a fall of 4.4% in real terms.

By income group, net bilateral ODA flows to low-income countries were USD 24 billion and fell by 6% in real terms compared to 2017. Aid to lower-middle income and upper-middle income countries, which stood at USD 21 billion and USD 10 billion respectively, fell by 11% and 19% in real terms. Net ODA to high income countries was USD 158 million in 2018.

Preliminary data show that net bilateral ODA from DAC countries to the group of least developed countries, which had been on a falling trend before rebounding in 2017, fell by 2.7% in real terms to reach USD 27.6 billion.

### **Bilateral donor performance**

On a flow basis, net ODA rose in seventeen countries, with the largest increases in Hungary, Iceland and New Zealand, by contrast it fell in twelve countries, with the largest falls recorded in Austria, Finland, Greece, Italy, Japan and Portugal. Most of these falls were due to lower in-donor refugee costs.

Net ODA flows from DAC-EU countries were USD 87.4 billion, representing a fall of 1.2% in real terms compared to 2017. If in-donor refugee costs are excluded, their ODA flows increased by 3.9% in real terms. Net ODA flows rose or fell in real terms in the following DAC-EU countries as follows:

- Austria (-11.7%): partly due to a lower volume of in-donor refugees;
- Belgium (1.0%): due to a slight increase in its bilateral and multilateral aid;
- Czech Republic (-3.2%): due to less support for in-donor refugees;
- Denmark (0.0%): stable;
- Finland (-14.6%): partly due to lower in-donor refugee costs aid and a smaller contribution to the EU development budget;
- France (4.4%): due to an overall increase in its aid programme;
- Germany (-3.0%): due to lower in-donor refugee costs;
- Greece (-14.5%): due to lower in-donor refugee costs;
- Hungary (20.7%): due to an increase in its bilateral aid;
- Ireland (5.6%): mainly due to an increase in Ireland's share of the EU development cooperation budget and contributions to UN agencies;
- Italy (-21.3%): partly due to lower costs for refugees in Italy;
- Luxembourg (3.7%): due to an increase in its bilateral and multilateral aid;
- Netherlands (5.8%): due to an increase in contributions to the World Bank group;
- Poland (5.4%): as it increased its contributions to the EU development budget;
- Portugal (-15.6%): due to a decrease in bilateral loans as well as contributions to multilateral organisations (which had been exceptionally high in 2017);
- Slovak Republic (4.4%): due to increased multilateral contributions which offset cuts in its bilateral aid;
- Slovenia (2.8%): due to an increase in its bilateral aid as well as contributions to the EU;
- Spain (-4.6%): due to lower volumes of debt relief compared to 2017;
- Sweden (4.5%): as it increased its multilateral aid;
- United Kingdom (1.8%): due to an increased capitalisation of its development finance institution, as well as increased contributions to the World Bank.

Net disbursements by EU Institutions fell by 1.9% due to a lower level of loans disbursed.

Net ODA flows in other DAC countries rose or fell in real terms as follows:

- Australia (3.8%): as it increased its contributions to the World Bank;
- Canada (5.0%): due to a first capitalisation of its new development finance institution as well as payments to multilateral organisations;
- Iceland (17.4%): due to an increase in its contributions to international organisations;
- Japan (-13.4%): mostly due to a decrease in its contributions to multilateral institutions;
- Korea (6.1%): mainly due to an increase in its bilateral aid programme;
- New Zealand (25.6%): as it increased its ODA budget;
- Norway (-4.2%): due to lower in-donor refugee costs;
- Switzerland (-2.9%): mainly due to lower costs for in-donor refugees;
- United States (-5.0%): mainly due to decreased disbursements in its multilateral ODA.

Other provider countries also report their development finance flows to the OECD, and indicated the following changes:

- Bulgaria (5.6%): due to an increase in multilateral contributions;
- Croatia (-1.8%);
- Estonia (4.1%): due to an increase in multilateral contributions, mainly to the EU;
- Israel (6.5%): due to increased contributions to regional development banks;
- Latvia (-2.1%);
- Lithuania (-7.4%): mainly due to a decrease in its bilateral aid projects;
- Malta (17.5%): due to increased in-donor refugee costs;
- Romania (10.1%): due to an increase in its bilateral aid;
- Russia (-14.3%): due to reductions throughout its aid programme;
- Chinese Taipei ( 1.4%): due to an increase in multilateral contributions;
- Turkey (20.5%): due to an increase in its bilateral aid;
- United Arab Emirates (1.5%): due to increased contributions to multilateral organisations.
